

HazCat Methamphetamine Chemical / Waste Identification System

KT1003 Methamphetamine Waste Test Kit

\$1118.00 plus freight

The HazCat Methamphetamine Chemical / Waste Identification System is a “lab in a box” designed specifically for immediate on-site identification of clandestine meth lab reagents, lab ware and synthesis methods. This kit is completely portable and self-contained in a sturdy, easy to carry (19”x11”x11”) ABS plastic case.

HazCat tests are easy to follow and may be done by non-chemists. The HazCat manual directs the user through logic charts and step-by-step instructions. There is no math and measurements are not required to be exact. There are enough supplies in the kit to do hundreds of tests. Performing on-site analysis saves time and money and helps preserve evidence.

The HazCat Methamphetamine Chemical / Waste Identification System is a stand alone unit. Everything you need is in one complete package.
